

Dan Chambers

F R O N T E N D E N G I N E E R

I'm an experienced **Frontend Engineer** working primarily in **TypeScript** and **React**, that's delivered websites and applications for startups, scale-ups and enterprises spanning industrial IoT, healthcare, retail and beyond.

I treat UI as a first-class engineering concern with specific focus on where design and engineering intersect, mapping and systematising the space between, and enabling teams to ship quality UI at speed, on repeat.

I'm equally effective as a specialist on larger teams, or as a full-stack owner on smaller projects. I have a proven track record of both.

Core Skills

Focus: frontend architecture, design-engineering, AI-augmented UI development, accessibility

Languages: TypeScript, modern CSS, accessible HTML

Tools: React, tRPC + Zod, Astro, Node.js, Cloudflare Workers, Sanity, Claude, Jest/Vitest

Experience

Full-Stack TypeScript Engineer at Hark by SolarEdge

Jul 2023 - Mar 2026

- Built data-dense analytics dashboards, presenting thousands of data points across hundreds of assets. Shaping data within a typed BFF, splitting container/view in the UI, doing the work in the right place to keep neither the backend nor the browser the bottleneck.
- Partnered with designer on a greenfield project to build a tiered design token system, integrated across Figma and code via Figma Code Connect.
- Built the design system tooling and Claude Code skills that made AI-generated UI viable at production quality, reducing component build time from hours to minutes and enabling full screens to be built directly from Figma.
- Prototyped a production-shaped generative-UI feature (an LLM composing dashboards from a typed component registry within the BFF) demonstrating how AI features could ship into the existing platform.

Lead Developer at Why Grief Matters

Jan 2023 - Apr 2026 (part-time, freelance)

- Architected and built a modern, cost-efficient stack with Astro, Sanity CMS and Cloudflare Workers, prioritising performance, scalability, and low operational overhead.
- Took ownership of product design following UX consultation, leading full site redesign, shifting role from pure delivery to broader technology and design leadership.

- Extended the platform with Cloudflare Workers-powered capabilities including LLM assisted content auditing and on-demand deployment, going beyond the initial brief to build operational resilience.

Frontend Developer at RAIDLOG.com

Jun 2022 - Apr 2023 (subcontracted via StyleTech)

- Owned frontend architecture taking app from start through to launch making pragmatic tooling and architectural decisions (React Query, Zustand, MUI, thin API layer) to meet conflicting goals of velocity and maintainability. Shipped for demo at PMI Global Summit 2022, securing first enterprise customer and paid subscribers.
- Built and shipped an AI-powered Risk Generator using the OpenAI API in 2022, before mainstream LLM tooling and patterns existed, using Yup schema validation at the LLM/UI boundary to manage graceful degradation of structured data output. Still in production today in the product's Enterprise tier
- Established lightweight engineering process from scratch working with the PM (GitHub Issues, Milestones, sprint planning), turning tense "when will it ship?" conversations into structured discussions of estimation, scoping and tradeoffs supporting reliable async delivery across US/UK timezones.

Software Developer at StyleTech

Dec 2020 - Apr 2023

- Built a Patient Reported Outcome Measures (PROMs) app for a client partnered with major UK cancer charities. Shipped as a single React codebase running natively via Xamarin WebView and on the web. Built in plain JavaScript with minimal dependencies for rapid delivery and low maintenance.
- Delivered the frontend for a Health Education England ePortfolio system to WCAG 2.1 AA, learning the standard, iterating through testing, whilst defending against competing client requests, ensuring it passed audit on go-live.
- Built a desktop payroll automation tool for a yacht management company, taking Excel data through to emailed PDF wage slips. An early-career commercial project that established a relationship leading to follow-on work with the client.
